

Perfection
in every detail.

Who we are
A European
success story.

What started out more than three decades ago with an invention by company founder Andrzej Wiśniowski has grown and evolved into a company with more than 2,200 employees that manufactures gates, windows, doors, fencing systems and other building components. This wide and extensive range of perfectly harmonised products is unique on the global market. In more than 30 countries, the WIŚNIOWSKI **"W"** is synonymous with quality, durability and cutting-edge technology.

What we do

A one-stop service.

We manufacture our products at our production facility in Wielogłowy, which has one of the most advanced machine parks in Europe and covers an area of more than 270,000 square metres. We are the only company that manufactures gates, windows, doors and fencing systems in-house and we provide a one-stop service: from façade through to perimeter protection. And with the HOME INCLUSIVE™ service, we also exclusively offer a uniform colour scheme from fenestration to fencing.

How we think

Perfection
down to the
last detail.

For us, quality always comes first – no ifs and no buts! We demonstrate this time and again with every new product. The result? Aesthetic appeal, outstanding functionality and durability. We monitor the entire process, from construction through to transportation. This is what our **"W"** symbolises.

How we work

Partner with international reputation.

We only source the components for our products from leading companies on the market whose quality expectations are as high as ours. With our smart home solutions, for example, we cooperate with Somfy, one of the market leaders in this area. Drives, profiles, hardware, handles, mechanical systems – whatever products we process, we only obtain them from the best-known brands, such as Somfy, Veka, Maco, GFA, Locinox and many more.

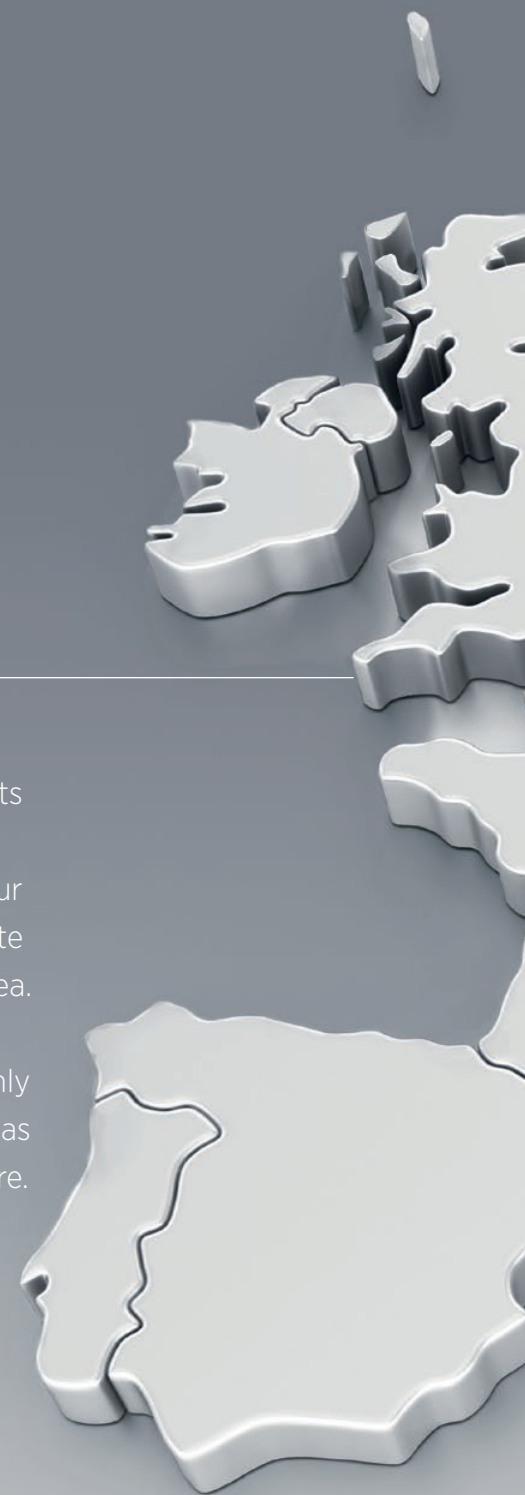

WIŚNIEWSKI

powered by

somfy[®]

Somfy is a world-leading supplier and pioneer in the area of home and building automation.

Veka is an internationally leading producer of PVC profile systems which are used to manufacture windows, doors, roller shutters and sliding doors.

Maco stands for quality hardware for windows, doors and window shutters.

GfA Elektromaten is a one-stop provider and European market leader in the field of drive systems for industrial doors.

Locinox develops and manufactures hardware for fences and gates and specialises in hardware for outdoor use.

How we act

Partner for **quality.**

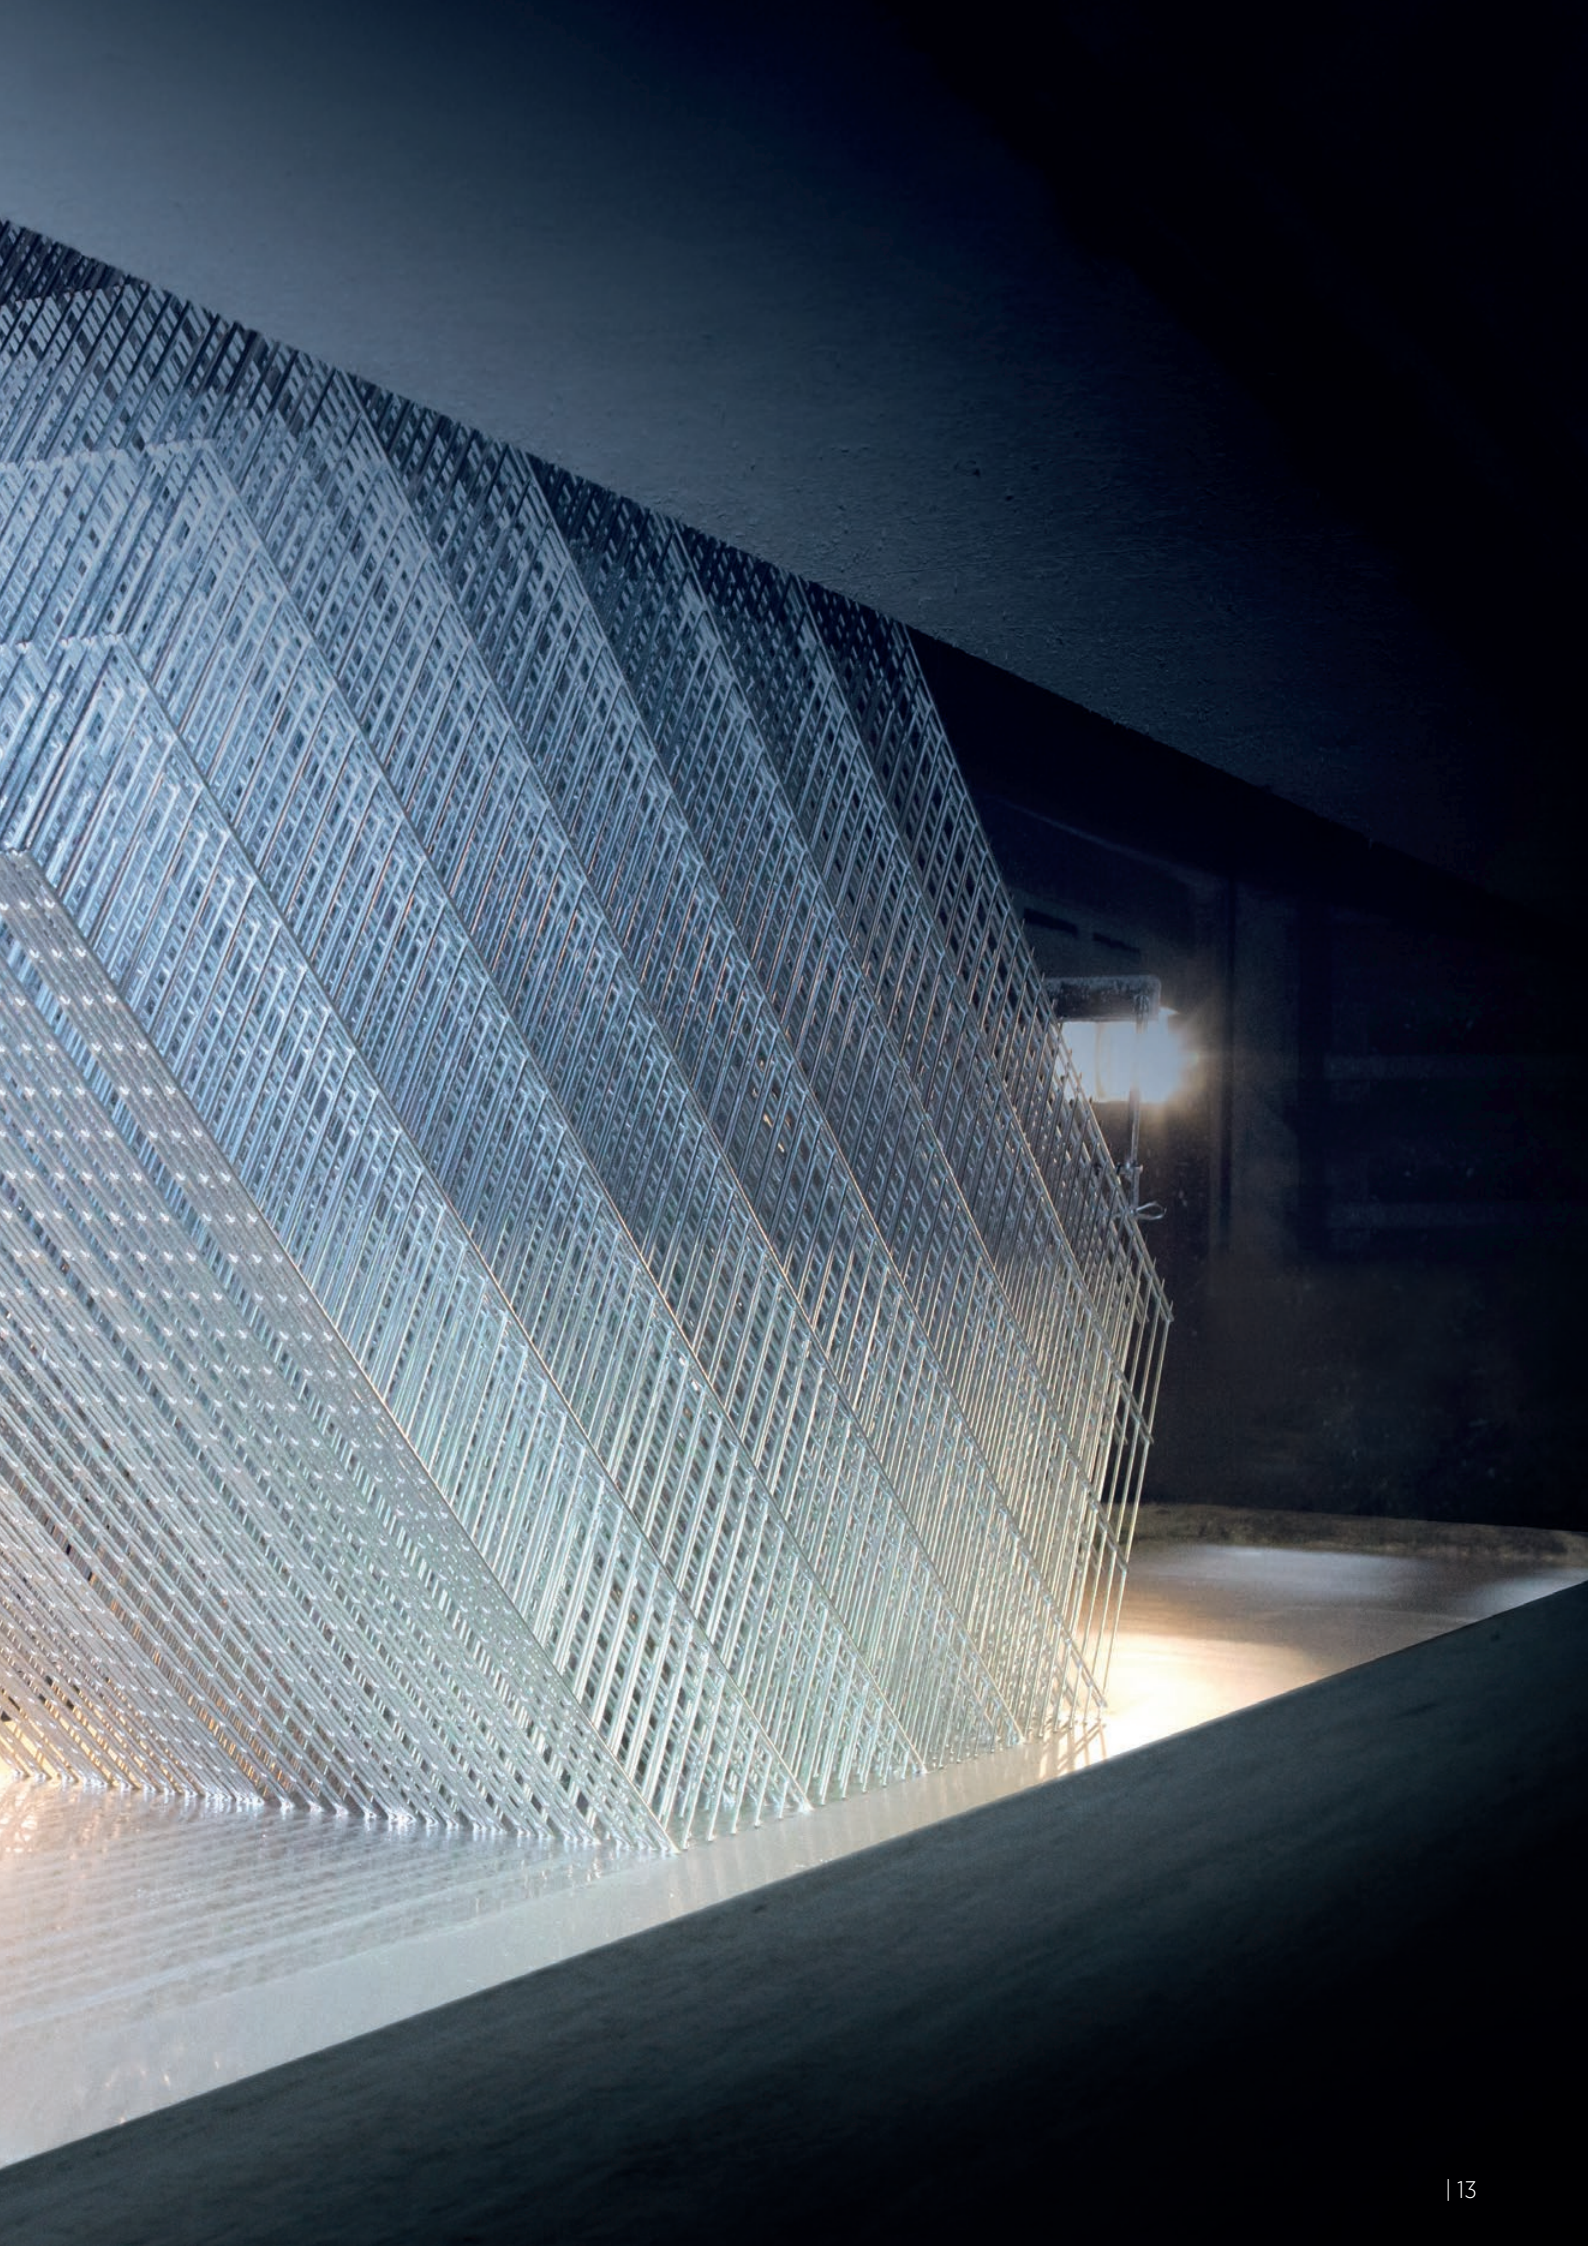

Specialist retailers, metalworkers and window builders or fabricators – we are continually expanding our extensive network of specialist partners near you. This ensures you receive top-notch advice and service from start to finish. We support our partners with a wide variety of materials, hotlines and unique software. Your data is transferred from the planning systems of our trading partners directly to the manufacturing facility and your product can be made to measure immediately.

What we guarantee

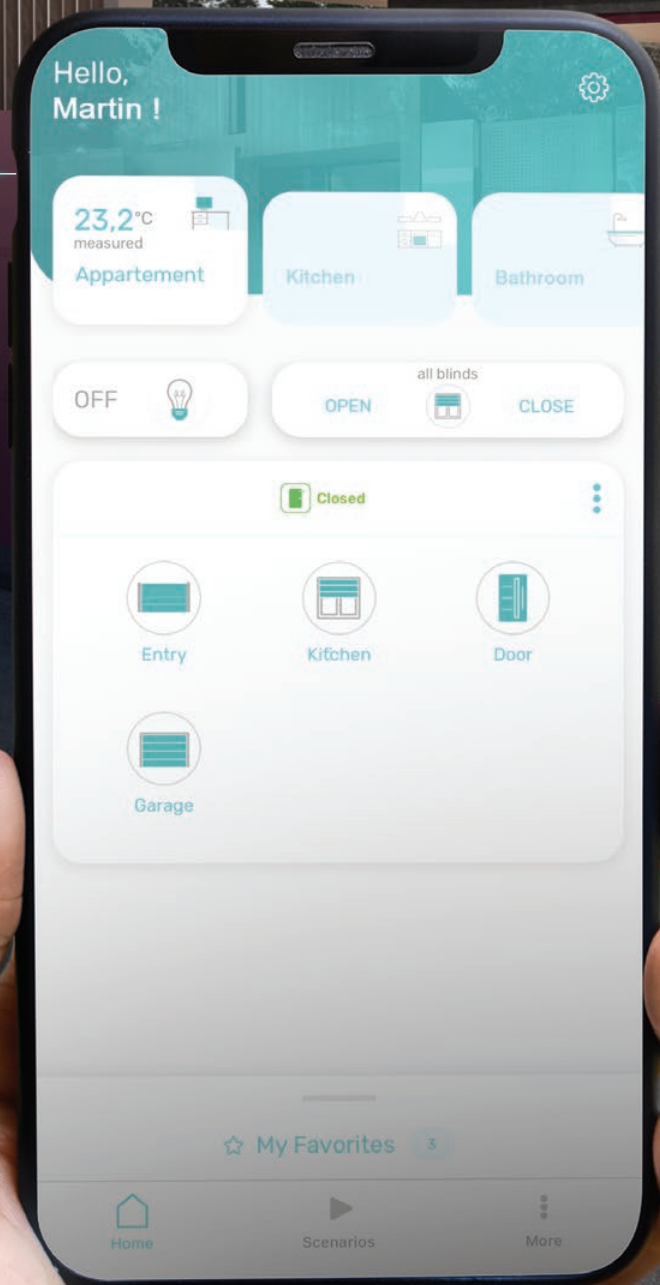

Problem-free durability.

Our state-of-the-art, computer-controlled production leaves no room for errors. This applies for all product groups. We assemble the glazing units for our windows and sliding doors at our premises. We draw the steel wire into the desired shape ourselves to ensure optimum stability. We use automated galvanising and powder-coating systems to ensure our products are perfectly protected against corrosion and can therefore in good conscience offer warranties on all our products lasting many years.

 smart
CONNECTED

smartCONNECTED enables you to integrate WIŚNIEWSKI products into your smart home system and manage them from your smartphone or tablet.

A modern house at dusk with a garage and a smart display in the foreground. The house has a red door and a garage door. The sky is dark blue with some birds flying. The foreground shows a paved driveway and a smart display with a red screen. The text is overlaid on the top right of the image.

How we make your life easier

Smarter **comfort.**

Our intelligent, network-capable products make everyday life easier and ensure greater comfort and safety. Make your home smarter – from the driveway to the interior spaces. We work with the most innovative technologies to ensure perfect compatibility. Enjoy the convenience of being able to control important household functions independently of time or place using your smart devices!

What we make for you

Our **products.**

We can satisfy all your requirements as a one-stop service with our comprehensive portfolio of products for residential and industrial buildings. What's more, we have developed our unique **HOME INCLUSIVE™** concept to ensure your chosen colour is applied consistently. Of course, all products include interfaces for **smart home technologies**.

GARAGE DOORS

TIGHT.

We have a versatile range of garage doors: sectional doors, roller doors, double-leaf doors and up and over doors. They look good from the outside but that's not all. Some solutions also incorporate a unique technology on the inside: the 60 mm thick INNOVO panel with outstanding thermal characteristics. This prevents heat losses at critical points in the door leaf. We therefore reduce energy losses.

Perfect seal:

Special frame construction and additional internal insulating elements between the panels to avoid thermal bridges.

Perfect durability:

High-quality materials, double ball bearing mounted guide rollers, high-performance drives from world market leader Somfy.

Perfect energy efficiency:

Excellent thermal transmittance (U-value) of garage doors with INNOVO panels of 0.33 W/m²K.

Door cycles

Burglar protection

INDUSTRIAL DOORS

RELIABLE.

Our industrial doors combine functionality, efficient thermal insulation and safety with aesthetic design. We provide made-to-measure solutions for a wide range of building types and applications. Our range encompasses sectional doors, roller doors, suspended sliding doors, folding doors and reloading systems.

Door cycles

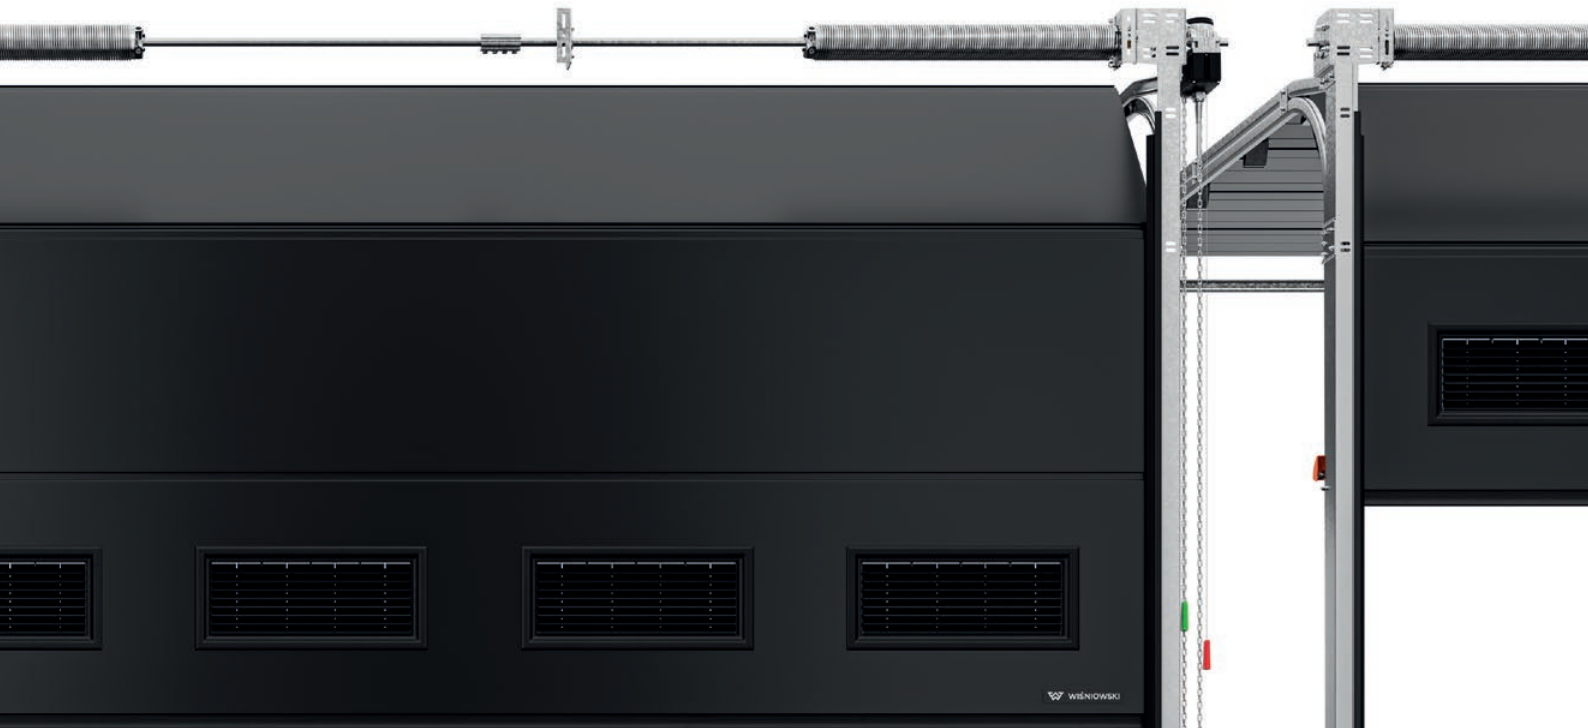

Burglar protection

Perfect details:

Quiet guide rollers and straightforward spring replacement, with the drive on the door and not on the wall.

Perfect security:

Our doors satisfy stringent security requirements, from reliable burglar protection in accordance with RC 2 to effective access controls. They comply with EN 13241-1 and carry a CE mark. They are also certified by TÜV Süd.

Perfect insulation:

Our MakroTherm sectional doors with 60 mm thick INNOVO panels also satisfy the requirements for passive buildings.

WINDOWS

CLEAN AND SHARP.

Clean sharp lines are the hallmark of the timeless no-frills design of our windows. We also adopt a similar clarity of approach to construction and components. After all, only the best is good enough for you. Whether PVC, steel or aluminium.

Perfect components:

We only use high-quality components by leading manufacturers, such as hardware from Maco and profiles from Veka.

WIŚNIEWSKI has been certified as a provider of **product quality at the highest level**. Only eight manufacturers in the whole of Europe have been awarded this **ift QUALITY SILVER QM320** certificate by the renowned testing laboratory ift Rosenheim to date.

Perfect investment:

First-rate materials and perfect workmanship guarantee functional reliability under all conditions.

Burglar protection

Perfect selection of colours:

Choose your desired shade from hundreds of colours.

DOORS

ELEGANT.

Our external doors made of aluminium and steel and our fully glazed internal doors are equally impressive. They combine formidable technical specifications with a wide range of design options and can be perfectly matched to any type of construction.

Perfect accents:

A wide range of colours and countless model variants give you full design freedom.

Perfect details:
All of our doors come with many benefits as standard that you will find impressive.

 RC2 Burglar protection

 RC3 Burglar protection

FENCING SYSTEMS

STYLISH.

Our fences are suitable for any type of premises and any type of building. They are stylish system solutions. Gates, wickets with posts and other components are assembled and perfectly adapted to your requirements. The elements are perfectly harmonised and guarantee straightforward, fast installation, outstanding functionality and security, and also a design to meet your expectations.

Perfect harmony:
With HOME INCLUSIVE™
you obtain a consistent
colour scheme when using
a variety of materials.

Perfect processing:

We monitor the entire production
process at our state-of-the-art
manufacturing facility and can
therefore guarantee perfection down
to the last detail.

INDUSTRIAL PERIMETER PROTECTION

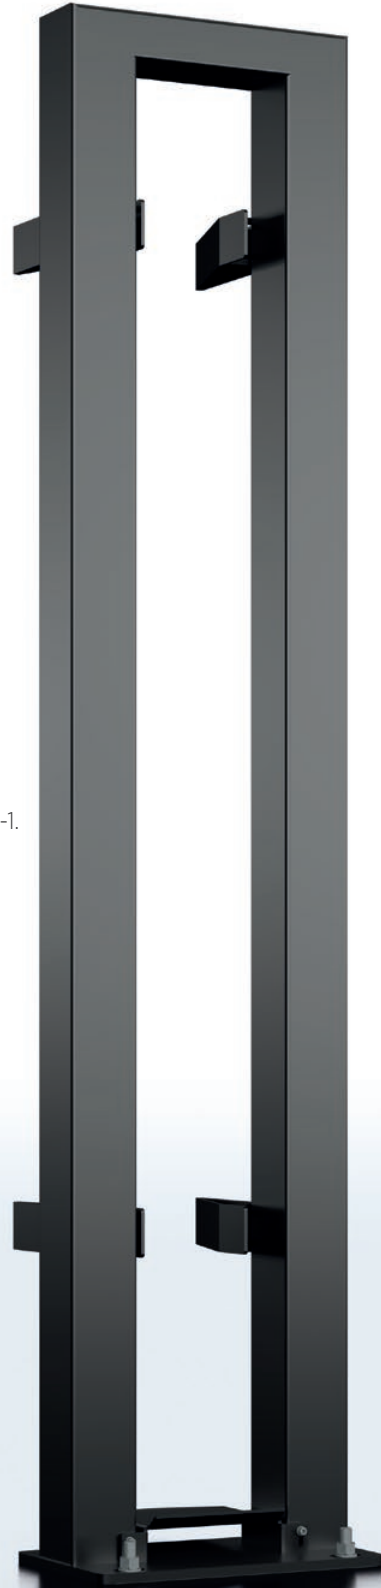

ALL-ROUND PROTEC- TION.

Perfect design:

Our fence segments and gates are supplied in all RAL colours, which are powdered in automatic coating systems.

Our industrial fence systems are manufactured using state-of-the-art technology and individually adapted to your requirements. All system elements are checked, safety-certified and supplied with a warranty of up to 10 years.

Perfect quality:

All of our products satisfy the current European and country-specific standards, e.g. EN 13241-1. And, they have a CE mark.

Perfect selection:

We offer a broad range of protection solutions with our versatile gates and fence panels.

CONSTRUCTION ELEMENTS

MODU- LAR.

Aluminium and steel façades, smoke dampers, aluminium and steel walls for indoors and outdoors, windows, doors, fire-rated walls and façades, skylights and façade blinds – we can offer you a wide range of construction elements for your projects.

Fire resistance

Smoke tightness

Thermal insulation

Functionality

Burglar protection

Perfect protection:

Our aluminium fire-rated windows and doors stand for maximum safety. They are available in the fire resistance classes EI 30 or EI 60.

Perfect façade:

A façade consisting of aluminium and steel elements is not only effective and aesthetically pleasing – it is also a perfect transmitter of daylight into interior spaces.

Perfect: **Your personal style.**
